

# In the Spotlight

**Name:** Janice Moses

**JOB TITLE:** **SENIOR NURSE  
FOR DIABETES**

**Experience & Qualifications**

- Registered Nurse
- Masters Degree in Diabetes
- Advanced Nurse Practitioner
- Qualified Independent Prescriber
- Worked in Diabetes for 19 years on acute wards and as a specialist nurse

**Role includes:**

- Overseeing the Diabetes Team. We are the first Health Board in Wales to have an integrated diabetes team to deliver a seamless service across primary and secondary care - if patients are admitted to hospital acutely unwell, we manage them during the acute phase, prepare them for discharge and put ongoing support in place via GP services and primary care Diabetes Nurses. I oversee these services and make sure they run smoothly across all hospital sites.
- I manage recruitment - we are expanding our team, as year on year we are seeing an increase in numbers of young people coming into adult services.
- 60% of my role is management and 40% clinical.

“Seeing patients when they are first admitted, very poorly and newly diagnosed with diabetes, not knowing what’s happened or what to expect - it’s a life changing experience for them. Then seeing them a year down the line, when they know how to self-manage their diabetes and their diet, that’s a very satisfying part of my role.”
