| Freedom of Information Request | FOI 22-003 | 12 <sup>th</sup> January 2022 |
|--------------------------------|------------|-------------------------------|

**From November 1<sup>st</sup> to December 25<sup>th</sup> 2021, how many people were admitted into an ABUHB hospital due to COVID-19, and how many of those recorded in daily figures of hospital admissions were admitted for any other reason but contracted COVID-19 while in hospital?**

Between 01/11/2021 and 25/12/2021 there were 485 admissions (please note these are numbers of admissions and not numbers of patients, as patients could be admitted more than once during the period) due to COVID-19. Of these admissions, 438 patients had already contracted COVID prior to being admitted to hospital (*PHW Classification = Community Acquired*), It is likely that 17 patients probably acquired COVID whilst in hospital (*PHW Classification = Probable Healthcare Associated Infection*), 14 patients definitely acquired COVID whilst in hospital (*PHW Classification = Healthcare Associated Infection*) and for 16 patients, it could not accurately be determined when/how they acquired COVID (*PHW Classification = Indeterminate*).

**Of the total number of people in hospital between 01/11/2021 and 25/12/2021 either with or due to COVID-19, how many patients were discharged in the same period?**

Of these 485 COVID admissions, 413 were discharged within the same period.
