

I'm currently writing the ethics to obtain blood samples and tissue from women undergoing laparoscopies for suspected endometriosis.

I was just wondering if you have any details about the:

- **number of laparoscopies performed per year in Wales (per health board if you have that) for endometriosis,**

Calendar Year	No. of Laparoscopies
2018	84
2019	111
2020	54
2021	84
2022	65

Please note the data provided in the above table is for Aneurin Bevan University Health Board only and is obtained from clinically coded hospital inpatients and day cases. If the inpatient or day case stay has not yet been coded it will not be included in the information provided. The primary diagnosis is the main condition treated or investigated.

- **and the rough percentage of laparoscopies which do confirm endometriosis**

The Health Board does not routinely record this information.
