Discharge advice following attendance with a 5th Metatarsal Fracture

- You have fractured a bone on the outer part of your foot.
- The fracture has occurred in a part of the bone which normally heals well without problems.
- The pain, tenderness and swelling you are experiencing in the foot should radually settle over a period of several weeks.
- During this time, you may find walking on the foot painful it may help to walk on the heel initially.
- You will be provided with a support for the foot in the form of bandaging or a removable boot. If required, you will also be provided with crutches.
- You may walk on the foot as much as pain allows, and if you have been given a boot should gradually discard it over 3 5 weeks as the pain settles
- Most injuries heal without any problems -however it may take several months for your symptoms to settle completely.
- Occasionally the fracture may fail to heal and continue to be painful, even after several months.
- A surgical procedure may be needed at this stage to help heal the fracture
- Should you have any worries or concerns following discharge from the hospital, please contact: 07786 113057. This is a Monday Friday service and we will try to get back to you as soon as possible. However, if it is an emergency please go back to A&E for further advice/treatment.
