

Ophthalmic Imaging Appointment

Patient Information

The need for today's appointment

A referral has been made for you to attend the ophthalmic imaging clinic today; this includes referrals via your optician, GP or Diabetic Screening Please note: If you are already under the care of an ophthalmic consultant, you may have received this appointment as part of your ongoing monitoring or treatment.

What tests have been done today?

An ophthalmic photographer has performed a visual acuity test to check your eyesight.

The photographer has also taken widefield photos and scans. This type of imaging is provided in addition to any imaging you may have received at your local opticians or eye screening services as part of an ongoing investigation.

Please be aware that the photographer cannot advise on the findings of your images or on any concerns regarding the health of your eyes – if you are experiencing any issues, please contact your optician to seek advice.

You have also been asked to complete a questionnaire – this is to ensure that we have the most up to date information regarding your medical history.

What happens next?

All the information collected today will be reviewed by an eye specialist. The results will be sent via letter directly to you, including information regarding the next steps of your care. This could include repeat tests and imaging for monitoring purposes at a later date.

Currently, there is no set time frame for receiving results, but the eye specialist will write to you in due course. We apologise for this inconvenience and thank you for your patience. Any queries regarding this, please contact 01495 765 186.
